DISPLAY ISSUES ON WINDOWS PC

CLiR Panel in Photoshop, showing display issues: part of the panel are cropped, text is too big...

CLiR Panel in Photoshop, properly displayed

On Windows machines, there are a few points that need special attention, if you've experienced graphic display "zoom" issues.

In fact, due to some graphic bugs between Windows OS and Adobe Photoshop, CEP Panels can show up as cropped.

Besides our recommendation of setting your monitor to a minimum resolution of 1080 pixels height, here are the areas that you need to access in order to make sure that your monitor is properly setup. Mac OS users shouldn't be concerned at all.

We basically need to access Windows Settings and look out for 4 parameters:

In **Display**

- Scale and Layout
- Display Resolution

In Ease of Access

- Make text bigger
- Make Everything bigger

5

To avoid any menu confusion in Win OS, we will just start from the Desktop ! Please quit Photoshop if it's running.

$CLiR_v1.2 > RESIZING THE PANEL$

When the CLiR panel has been resized, use the mouse wheel and **scroll** to show the rest of the panel:

Normal

Highlights

100

Camera Raw

Normal

Multiply

Only Lights

No Lights

Color

Luminosity

Panel minimum size 565 x 290 pixels

Panel maximum size 915 x 290 pixels

CLiR

$CLiR_v 1.2 > RESIZING THE PANEL$

To resize the CLiR Panel, first undock it.

Then grab the Resize Panel handle at the bottom. Click & drag up to resize.

CLiR

View Mask Mask → Layer Delete Mask

/- **/**+ **O O O O O**

Lighter

Darken

Only Midtones

Blend ALL Tones

Panel can be resized to a convenient height of 560 pixels to accommodate small resolution screens i.e. 720 lines displays.

Width size stays constant at 290 pixels.

You can scroll down too

When the panel is **undocked** it can be resized

Use the mouse to **scroll** down or up to see hidden content

Click & drag right to dock the panel

The big improvement here is not only the CLiR Panel can be resized to a smaller height, but it's now possible to use your mouse to scroll up or down and see the overflown hidden content When the Panel is **docked** it will be displayed with its maximum height

CLIR PANEL > OPEN vs. EXPAND

Option (a) OPEN

If you click the CLiR icon

The **Opened** Panel shows up as *maximum* height size. It *cannot* be resized!

If your screen resolution can accommodate at least 1080 horizontal lines, then **Open** is a good option.

Option (b) **EXPAND**

If you click the icon upper right corner ""

Click Q Kind

The *Expanded* Panel *can* be resized!

Fix scaling for apps

Some desktop apps might look blurry when your display settings change. Windows can try to fix these apps so they look better when you open them the next time. This only works for apps on your main display, and it won't work for all apps.

Let Windows try to fix apps so they're not blurry

~

Custom scaling

All your displays will be set to the custom scaling size you enter. This can cause some text, apps, and other items to be unreadable if a display doesn't support that size. It might be hard to go back to your original settings.
